Education

VIT Bhopal University

B.Tech in Computer Science and Engineering — CGPA: 8.76

Bhopal, India

Aug 2022 – May 2026

Skills

Programming Languages: C++, HTML, CSS, JavaScript, TypeScript, C, Python, SQL

Frameworks & Libraries: React.js, Node.js, Express.js, TailwindCSS, Bootstrap, Matplotlib, OpenCV, TensorFlow

Databases: MongoDB, PostgreSQL

Tools & Technologies: Data Structure & Algorithms, Git/GitHub, REST API, VS Code, Tableau, YOLO

Certifications: SmartBridge FullStack (MERN) MongoDB Developer, IBM-Adroit Generative AI

Experience

IgniteU Learning, Noida

Software Development Intern

Mar 2025 - Apr 2025

- Enhanced Student Analytics Dashboard by engineering 8+ React.js components to visualize student performance metrics during course completion by integrating Axios + Express.js APIs to stream real-time data of 500+ students, helping mentors more effectively identify weak learning patterns and spot struggling students by 50%.
- Architected an AI-powered mock-interview feedback pipeline that transforms mentor evaluations into personalized PDF reports by analyzing feedback with a generative AI API and generating structured skill-wise insights, actionable improvement steps, recommended resources, and timeline guidance, improving student clarity in preparation by 75%.

Elevate Labs, Remote

Web Development Intern

Aug 2025 - Sept 2025

- Developed “GitHub Explorer” using the GitHub REST API, an interactive dashboard enabling users to search, filter, and sort repositories, delivering real-time insights including stars, forks, activity trends, and metadata, improving repository discovery accuracy by 40%.
- Engineered a responsive React.js + Tailwind CSS frontend integrated with Chart.js visualizations and features such as bookmarking, personal notes, and persistent storage, enhancing navigation and user retention for 100+ active users.

Projects

Event Prediction Market | C++, LLM-Integration, WebSocket, PostgreSQL | [Github](#)

May 2025

- Developed real-time event prediction trading platform enabling users to trade on outcomes of global events, supported by an LLM-based market creation pipeline that detects trending topics and generates new event markets, thereby reducing manual event creation time by 90%.
- Implemented a dynamic pricing engine driven by market sentiment and incoming data, also allowing users to track positions and analyze portfolio performance.

Focus Master | React, TypeScript, TailwindCSS | [Github](#)

Jan 2025

- Built a productivity web application that integrates a Pomodoro timer, task management workflow, and progress analytics to support structured work cycles and daily productivity tracking.
- Designed a responsive UI and accessibility features, increasing retention among early testers by 50%.

Vision in Dark | Python, OpenCV, YOLOv8, TensorFlow | [Github](#)

Aug 2024

- Designed computer vision pipeline for autonomous vehicles enhancing low-visibility images and detecting nearby objects with real-time collision risk estimation for improved safety in adverse conditions.
- Architected YOLO-based object detection with neural network model achieving 92% accuracy in collision probability prediction, improving reliability in low-light and adverse weather scenarios.

Achievements

- Competitive Programming:** Codeforces Rating 1200+ (Pupil), LeetCode Rating 1650+ (Top 10% globally)
- DSA Proficiency:** Solved 500+ problems across LeetCode, Codeforces, GFG, and Code360.

Leadership

- Cultural Committee:** Core Team Member—Led planning and execution of “AdVitya 2025” with 3,000+ participants
- Chess Club:** Sports Coordinator—Organized 2 chess tournaments with 100+ participants; 1600+ rating on Lichess
